You Are Invited to Visit The Experimental Station

THE traveller on the Edmonton-Calgary highway through central Alberta will notice, just outside the southern limit of the town of Lacombe, a broad expanse of tree-studded lawn and a group of houses and farm buildings. A study driveway leads into the grounds. On one side of the entrance is a yellow sign-board, bearing in black letters the title "Domestic Experimental Station." On the other side, coiled neatly in the shrubbery, is a smaller sign, with the cordial invitation "Visitors Welcome."

Every summer thousands, beguiled by the invitation and the beautiful shade and coolness, turn in at the broad entrance and follow the road to the office, bordered on either side by rows of trees and shrubs of all varieties. In the summer, the drive, way from the office to the farm buildings is flanked by two rows of brilliant and variegated bloom, and the fragrance of the soft fragrance of thousands of annual and perennial flowers.

To his right, as the visitor passes the office, is the vegetable garden, where hundreds of varieties of garden crops are annually tested. Next to this is the bush fruit plantation, where raspberries, currants, and many other kinds of berries and fruits are produced in profusion. If any information on horticultural subjects is desired the Gardener in Charge, Mr. Ramsay, is prepared to answer questions, and give information which is both authentic and practical.

If the visitor is interested in animals—and who could help but enjoy the sight of a high-bred, well-trained animal, a masterpiece of Nature's handiwork—his stable will afford considerable pleasure. No one need be at all backward about entering the barn, as the legend "Visitors Welcome" does not refer to the grounds alone, but to the entire station.

The first of the barns visited is the north horse barn. On entering the visitor experiences an acute disappointment—the barn is completely empty. The box stalls are bedded, each with a layer of straw feed—but not a horse is in sight. On glancing out the back door, a lofty crest bearing a majestic head and neck, the face of the visitor is attracted to the fence. Through the narrow aperture between the boards in the fence the stallion can be plainly seen, looking over the top of his head in the exercise corral—a ton Clydesdale stallion, galloping about with all the fervor of the old-fashioned horse. He should not be whiplashed. This deep-bodied, dark-colored nine-year-old Clydesdale stallion really bears the name "His Majesty," as he bears the Scotch Championship at the 1927 Chicago International. In the adjoining corral is a two-year-old son of the old stallion, ready developing into a big, brawny horse. In a third yard are several yearlings, all showing considerable of the type and conformation of the sire.

Apparently there are no other horses in the corral, and the visitor starts through the route of the old stallion, known as the work horse barn. There he meets the Scotch horseman, John Wood, who, on his equine, tells the visitor that the work horses are all large, round, and the mares and foals, and other young stock, are in the pasture. The visitor resolves to see the brood mares and their progeny in the pasture, and makes a mental note that he must see the work horses when they are going out to work in the afternoon; then he goes on to the cattle barn.

Most of the cattle, too, are out on pasture, but a few remain in the corral. The herd of purebred Shorthorns is headed by the imported bull "Beaufort Lindian" and contains two Royal Wiltshire Fair champions, several females of excellent beef type; and a number with good milk records, as well as a large number of young cattle of extra good breeding, which show considerable promise. Notable among these is a young bull recently secured from Frank Wood of Blyth, Ontario. This is just a ten-month-old calf, but he has fair to become a real head leader, and a good many horns; he is pinned on him. Then, too, there are several heifers bred by the Experimental Station that are worthy of notice. William Jardine, the Herdsman, is always pleased to show visitors the stock under their care.

Continuing on his way, the visitor comes to the poultry plant, with its flock of some three hundred laying hens and thousands of chicks, and the White Wyandotte breed. Most of the younger generation are out on alfalfa range, where they grow like weeds. This flock has given a good account of itself in the Egg Laying Contests at Indian Head, Saskatchewan, and Brandon, Manitoba. J. H. West, the Poultryman, will show visitors around the brooder house, laying houses, and colony houses, and explain the workings of the stock under their care.

Following the route which leads south of the poultry plant for a quarter mile, the visitor comes to the forage crop nursery, included in the station are over two hundred and fifty plots of different varieties and strains of grasses and legumes, being tested for their suitability for use in Central Alberta. The plots are of great interest, even to not particularly well-versed in agriculture, and many of the grasses and legumes are finding their place as hay crops, or distinct, having special conditions of soil or climate under which the old standard varieties of hay and pasture crops will not produce satisfactory results. Included in this nursery are various strains of alfalfa; sweet, white, and red clover; timothy and bent; timothy, Kentucky blue, bromine, rye, timothy, crested wheat and Red canary grass; and varieties in the early experimental stage such as oat grass, vernalis, sainfoin, meadow fescue, rye grasses other than Western, and several native grasses. Each new grass is tested in that it may be easily identified and compared with its neighbors. Knowledge gained from actual examination of such crops is not soon forgotten.

Besides these grasses and legumes, there are plots sown with various mixtures, to show how they will combine. For instance, an early maturing crop may be mixed with a late maturing variety, so that the first will come ahead and provide early pasture, and at the time it has passed its usefulness the latter variety will be ready for use. These plots appeal both to the man who visits the Experimental

THURSDAY, MAY 10, 1928

the avenue of maples to the apiary, where some dozen hives of bees are maintained. For the beekeeper, and also for the amateur, there are many points of interest in this quarter. P. R. Walker is in charge of the bees; if he cannot be found at the apiary, he will probably be discovered at the poultry plant, where he spends part of his time as assistant poultryman.

After his long tour of the grounds the visitor is likely to be hungry. Remembering the table he has seen under the Manrocks maple between the apiary and the garden, he returns to them, and he and his family proceed to prepare and enjoy their lunch. After lunch is over and the scraps and pieces of paper have all been swept in the waste box, the visitor strolls back to the barnyard, and reaches the horse barn just as the teams are being brought out.

Seymour Edmunds, the Farm Foreman, is attending to the details of the work on his particular job of the day. The men enter the stable and come out with their teams, all brisk and spry and a joy to the eye of any true horse lover. The work horses include some twenty white-faced Clydesdale mares and geldings, all the finest of their kind. Two geldings, full brothers, are especially noticeable by virtue of their size and vigor. The teamsters hitch up and move off, and the visitor is left with the sign "Visitors Welcome" why not go on at his fact value and come in and spend an interesting and profitable hour or so at least? And when you have again gone on your way, remember that the staff will be glad to see you again.

And for those who live near at hand, and have always intended to go over the station grounds, but never quite got around to it—don't put it off any longer; on every side there are object lessons which mean real dollars and cents to the intelligent farmer, and the study of the large and large garden plenty of scope for the wife and the family, if they prefer not to take the trip round the fields, and the Lacombe districts one of the most prosperous in the Province; and right in the center of this progressive district is the Experimental Station, endeavoring to broadcast authentic information on all phases of farming. There is but one logical conclusion. The station is vitally alive, and it has not fallen on barren soil.

WOMEN'S INSTITUTE
Mr. A. Jenkins read an informative paper on the "League of Nations" at a meeting of the Women's Institute on Saturday, May 5th, at the home of Mrs. J. Saunders.

Having been in existence for only twelve years, perfection ought not to be expected of the League and its members. Mr. Jenkins, as the host of the many accomplishments of the League since its inception.

Roll Call was answered by members naming best Canadian products in use in their homes. Mention was also made of the fact that in order to have a vote at the meeting, members should have their dues paid by May 1st.

Next meeting is to be held at the home of Mrs. R. Watson.

ERADICATION OF COUCH GRASS
Scientific methods for control and eradication of Couch Grass, a weed which is spreading over Western Canada, is in a pamphlet prepared by Dr. G. P. McKeown, Professor of Agronomy and W. Tidley, B.S.A., Assistant on weed research, of Agriculture Canada, and the Northwest Grain Dealers' Association. Line elevator companies operating throughout the Prairie Province have financed scientific studies of the weed problem which have resulted in the pamphlet. The results of these investigations have now been published in pamphlet form. The pamphlets are being distributed free at all line country elevators.

Couch Grass was introduced into Western Canada through lots of seed sent to farmers in this country from friends in Europe during the latter part of the last century, and before proper inspection facilities were established on needs imported into Canada. The Chief Inspector of the Dominion Seed Branch at Winnipeg has found that approximately one-half of the Brome Grass seed sent to the Seed Branch for inspection contains Couch Grass.

The pamphlet dealing with Couch Grass outlines methods for the control and eradication of this weed in a manner that the ordinary layman can easily read and follow. Any farmer troubled with Couch Grass in his field should obtain a copy. It is also particularly valuable and informative to farmers who wish to keep their fields free from this weed.

FROM OUR FILES
OF 30 YEARS AGO
R. W. McLeod of the N.W.M.C.P. came down from Edmonton Wednesday.

A. T. Inskip is having rooms fixed up in Hudson's Block with the intention of putting in a wholesale liquor stock.

The Lacombe Cricket Club organized for the season Tuesday evening. On Thursday and Friday evenings at 8 p.m. the married and single members will meet in battle.

Lacombe, Alta.

C.G.I.T.

"Treasure" was the theme chosen by the four C.G.I.T. groups for their annual Mother and Daughter bazaar, which was held on Saturday evening, and which was attended by approximately 130 Mothers and Daughters.

Miss Phyllis McCaughy officiated as Chairman, and Miss Elizabeth Layton directed the singing which interspersed the speeches.

In her tribute to Mother's Day, Miss Patsey Parsons pointed out that many forces contribute to mold the character of girls, i.e., Home, Church, School and Community.

Mrs. R. McKenzie's reply mentioned the qualities which mothers wish their daughters to possess: power of making friends, good manners, modesty, happiness, tact, etc.

"The Girl's Relation to the Church" was chosen by Rev. R. B. Layton as his topic, and he likened the religious life to the Pearl of Great Price, and pointed out the danger of obtaining an initiation.

The meeting closed with the candle lighting ceremony, which was led by Miss E. Jago, Miss Lorne Craig, and Miss Dorothy Duncan.

School Dramatics Create Very Great Interest

LACOMBE students carried off 25 first of the 38 winners in the Lacombe School District Dramatic and Musical Festival, held in this centre on Thursday, April 25th.

Of the 26 schools in the Lacombe area, 16 sent in entries, but owing to sickness and the busy season, some of the entrants failed to appear.

Beginning at 9:00 A. M. the Festival competition program ran along smoothly until 5:30 P. M. and the committee in charge were highly complimented by Inspector A. R. Gibson, who stated it had been the most efficiently managed festival he had attended. The credit for this success is largely due to R. J. Pickard, Chairman of local committees, who devoted much time and effort to working out each detail of the competition and to organizing the schools, and the High School staff, gave splendid assistance as Chairman in the competition rooms, and several High School students acting as Secretaries to the Judges, facilitated the functioning of the program.

During the afternoon parents filled the school hall, accompanied the soloists at the piano, Inspector Gibson busily addressed the audience and appealed for assistance in getting the winners to Red Deer for final on May 17th. Following is a list of the winners who are entitled to enter the finals at Red Deer:

Vocal Duet—1st. Phyllis Cooke and Victoria Wright, Rimbey High School.
Boys:
Grade 1—1. Billy Child, Woodville; 2. Tommy Mulvihill, Rimbey; 4. Vernon Webb, Rimbey.
Grade 2—1. Francis Mulvihill, Rimbey; 2. Ronnie Cook, Rimbey; 3. Fred Thorsdahl, Rimbey; 4. Gordon Rimbey; 5. Keith Stevens, Rimbey; 6. Gordon Baldridge, Rimbey.

Grade 3—1. Robt. McVittie, Rimbey; 2. Allan Lloyd, Rimbey.
Grade 4—1. Edwin Irwin, Monte Vista; 2. John Wilson, Waddle; 3. Harold Cook, Rimbey.
Grade 5—1. Virgil Stevens, Rimbey; 2. Ivor Cooke, Rimbey.

CLIVE, April 28.—The Clive district school musical festival held Wednesday, in which many schools competed, was marked by fine talent. Winners will attend the central Alberta festival to be held in Red Deer on May 17. Following are results:

VOCAL SOLO
Class 1—1. Helen Macintosh; 2. Lois Neblin.
Class 2—1. Eva VanEaton; 2. Jean Duffy.
Class 3—1. H. Stevens; 2. Alice Macintosh.
Class 4—1. George Harrow; 2. John Worden.
Class 5—1. Helen Harrow; 2. Doris Stevens.
Class 6—1. Bobby Heald; 2. Elaine Duffy.
Class 7—1. Peter Harrow.
Class 8—1. Peggy Harrow; 2. Genevieve Tompkins.

VOCAL DUET
Grade 5 to 8—1. Peter Harrow and Bobby Heald; 2. Wayne Bell and Elaine Duffy.
Grade 9 to 12—1. Ruth Williams and Genevieve Tompkins.

RECITATION CLASSES
Grade 1—1. Grace Williams; 2. Lois Neblin; 3. Helen Macintosh.
Grade 2—1. Eli Rasmussen; 2. Florine Stevens; 3. Herbert Carson and Maxine Westlund.
Grade 3—1. Evans Carson; 2. Evelyn McCormick; 3. Elaine Macintosh.
Grade 4—1. Annie Leard; 2. Frances Rymond; 3. Ruth Williams.
Grade 5—1. Margaret McCormick; 2. Irvin Armstrong; 3. Ernest Stump.
Grade 6—1. L. Leard; 2. Kathleen Leard.
Grade 7—1. Frances Gimes; 2. Carl Knudson; 3. Leslie Webster Howard Armstrong (tie).
Grade 8—1. Walter Longstreet; 2. Peter Harrow; 3. Harry Williams.
Grade 9—1. Thelma Stedman; 2. Mabel Westling; 3. Mary Allison.
Grade 10—1. Bertha Haskins; 2. Margaret Williams; 3. Nellie Haskins.
Grade 11—1. Alice Sloan; 2. Ruth Bachor; 3. Olivia Elliott.
Dramatization class, rural schools. 1. Westling; 2. North Star.

JUNIOR GOLF CLUB
Kennedy and Phyllis McCaughy were elected President and Secretary, respectively, of the Junior Golf Club at a recent meeting of that organization.

A Handicap competition is to be held on Saturday, May 12th, the winner to be presented with a machine. Entries for the competition is 15c. Ladies' and Gentlemen's prizes are also being offered to winners of the qualifying round.

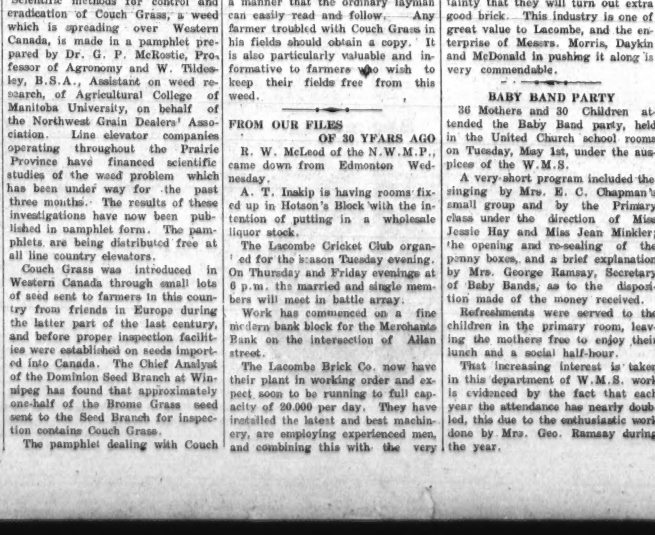

The young people have a large membership and are looking forward to an enjoyable season on the links.

ALBERTA WINS SECOND PLACE IN HOG TRADE
Edmonton, May 8.—In the calendar year 1928, Alberta marketed a total of 1,022,000 hogs of which 7.92 per cent graded select and 28.67 per cent graded banded, according to figures released by the provincial agricultural department last Thursday.

Alberta's total marketings were 22 per cent of the Dominion total. Taking second place to Ontario among the Provinces.

valon Theatre and Edgington's B1 liard Hall, Nanton St., Lacombe (Cameron)

Great Progress In Search Of Rust Resisting Strains Of Wheat Reported At Meeting

Marked progress in search for rust resisting wheat strains with high milling qualities were reported as the associate committee on grain research for the National Research Council of Canada met at Winnipeg.

For the first time, an adequate test of the behavior of standard wheat varieties as well as the new rust resistant wheats was carried out on grey wooded soil at Fallis, Alta., said a statement issued at the meeting.

The most striking feature of the results were the pre-eminence of Redward as a high quality wheat under such conditions. Marquis and Ceres also showed up very well and five of the new wheat hybrids practically equaled these two standards.

Dr. W. P. Geddes, Winnipeg, reported that the installation of the Durum research laboratory had been completed. He gave the results of a number of studies on the yellow pigment content of wheat and rust spores.

As a result of moisture and grade surveys conducted in 1932 and 1933, it was found swathed wheat suffered more weathering damage than either stalk, threshed or straight combined grain.

In connection with arrangements being made by Dr. L. H. Newman, Winnipeg, to conduct growing tests on deliveries of wheat made by farmers to country elevators in order to determine the percentage of the different varieties, it was planned to grow a series of the most widely grown varieties at 300 points from pure seed.

The wheat from these will be submitted to milling and baking tests next year in order to secure information on their behavior under a wider range of environment conditions than had previously been investigated.

Dr. A. S. Amott, Edmonton, reported progress in testing and breeding of drought resistance in wheat with the aid of a machine in which hot dry winds were artificially produced.

Some of the varieties tested showed much greater resistance than others and are being used as parental material in crosses for the production of new and better strains.

School Experiment

Children Not Instructed In Arithmetic Until The Sixth Grade

Suggesting the Ontario public school curriculum was in urgent need of renovation, Prof. R. B. Liddy, department of psychology, University of Western Ontario, offered for consideration by the urban teachers' section of the Ontario Educational Association, an experiment undertaken by the educational authorities of Manchester, N.H., in which children were not taught arithmetic until they graduated to the sixth grade.

"Incredible though it may seem," Prof. Liddy said, "children who were taught nothing of arithmetic in the early classes were just as far advanced after one year's tuition in the sixth grade on the particular subject as children taught in the traditional way." The Manchester board, he added, had found the experiment successful.

Shortage Of Horses

A Big Problem Facing The British Army To-day

One of the big problems the British army is faced with to-day is a shortage of horses, said Col. G. R. Peckers, V.C., of the Royal Military College staff, speaking on "The Problems of Today in the British Army," before the Kingston Military Institute.

The war office does not know where to turn, he said, to get the horses that would be necessary in case of mobilization and is being forced into mechanization of the army whether it wants it or not. Contributing to this shortage, the speaker remarked, was the tariff warfare between Britain and the Irish Free State. It had knocked out Ireland, formerly of great importance as a source of horses.

By Ruth Rogers

AN ESSENTIALLY SMART OUTFIT FOR SPECTATOR OR ACTIVE SPORTS

Being smart, I'm quite certain you'll want to-day's pattern as soon as you see it. You'll hardly be able to wait until it arrives to cut it out. Look at how deceiving this little tennis rig (in wet sketch) is before the skirt and jacket are discarded. The skirt is delightful the way it buttons at the front and is so easily removed.

The original was in bright yellow ribbed cotton with brown ribbed cotton jacket.

Another very smart idea is red and grey plaid sweater used to make the shorts and the blouse. Repeat the grey tone for the skirt in crash-linen with red crash-linen for the jacket.

Style No. 617 is designed for sizes 11, 13, 15, 17 and 19 years.

Size 15 requires 4 1/2 yards 35-inch material with 2 yards 35-inch for jacket.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Takes Over New Charge

Chaplain Welcomed By People Of Tristan da Cunha

February 15 was a great day for Tristan da Cunha. The Royal Mail liner Atlantis called with a new chaplain, the Rev. Harold Wilde, also with timber for repairing the church he was to take over, twelve tons of provisions and two lifeboats, a present from England to one of the loneliest communities in the world. There is no harbor, and transfers have to be made in boats. Rarely is the smoke of a steamship seen in those seas, and a gala day was made of the brief stay of the Atlantis, the islanders crowding from goatskin boats up the ladder of the ship. The women were entertained at tea, after which the Atlantis, with her siren blowing good-bye was away on her 1,500-mile voyage to Cape Town.

To a curious community the Rev. Mr. Wilde will have to be shepherd. The morals of his flock are said to be beyond reproach. They do not drink intoxicating liquors, they are industrious, healthy and live long. They have no written laws and manage their own affairs peacefully. In 1925 there were fifty-five inhabitants. They raise cattle, sheep and pigs, and grow potatoes, fruits and vegetables. The men are good sailors, though with boats ill suited for rough seas. From the wool of the sheep the women knit garments, and most of the men are handy carpenters. The settlement, known as Edinburgh rises from a plain in the northwest of Tristan. It has a history not without interest: discovered in 1506 by the Portuguese Admiral Tristao da Cunha, occupied by Thomas Currie in 1810 used as a base by American cruisers to raid British cargo ships in the War of 1812 annexed to Cape Colony in 1816 turned over to William Glas married with two children, and later attracting British, Dutch, Italian and Asiatic settlers. It is their descendants whom the Rev. Mr. Wilde will have as parishioners.—New York Times.

Help Egg Production

By Use Of Proper Methods Production Can Be Greatly Increased

Two factors that have most to do with the revenue from eggs are the price received and the rate of production. Unfortunately, the rate of production for the product is not always subject to the will of the poultryman, but the rate of production is in his hands and his alone. A much higher yield is within reach of any breeder who will give some care to his flock. A good male alone can make to pay for himself many times over. At one of the Dominion Experimental Branch farms, a careful selection of breeders has resulted in an average increase over five years of 73 eggs per hen, the production being raised from 241 to 314. The Egg Laying contests also have demonstrated what is possible to be done in good farm flocks. Since the contests started in 1919 the average yield has increased from 120 to 178. The average production in the 1931-32 contests was 375 eggs, and this average was taken from a total of 4,370 birds, entered by 437 breeders in the 13 contests throughout the whole Dominion, the average may be taken as fair for the better classes of breeders in Canada. Further, the hatchery approval and cockerel distribution policies of the Dominion Department of Agriculture are at the disposal of those building up poultry flocks.

Need For Tolerance

Certain People Always Want Every One To Think As They Do

W. L. Clark writing in the Border Cities Star says: "Former Governor Alfred E. Smith hit the nail on the head at a New York rally when he said: 'Tolerance is not peculiar to Germany. We, too, have people who are like the Jews or Catholics, and some who don't like anybody.'"

How true and what a pity! There is a class of people who want every one else to think as they do. These same people believe that the particular nationality to which they belong has all the virtues and none of the faults of others. Their brand of religion is the only real faith, giving no consideration to the fact that there are unlimited numbers of God fearing and conscientious adherents in every religion.

There are those who could banish the Roman Catholic from the land. There are others who would compel all Protestants to become Catholics. There are some who would expel the Jews. There are a number who would let no immigrant but English into Canada and others who would not let in any English. And so it goes.

More than ever is there need for tolerance in the world to-day.

Matter Of Replacement

Farmer Afraid Business With Insurance Company Was Risky

A Garafaxa farmer had his barn burned and he put in an application to the local agent to get his insurance money. After a few days the insurance adjuster came around with the local agent. They inspected the ruins and did a little figuring and the agent said:

"According to the terms of your insurance policy, Mr. X, the company has the option of paying the loss in cash or of building you a new barn. They have decided to replace your barn with another of similar size." The farmer was pretty mad about it.

"Well, if that's the way you do business you can just cancel the insurance policy on my wife. If she died you'd be coming around here offering to replace her with another one of the same size, and I won't have it!"

Love Makes A Young Man Grow A Mustache And An Old Man Shave His Off

Leeds plans to spend \$60,000,000 for new houses for slum dwellers.

LILLIPUTIAN PAGEROY SEES LONDON

John Maguire, London's smallest pageroy, has been engaged by one of the large hotels. John, who is 14 years old, weighs only 55 pounds and is 3 feet 5 1/2 inches tall. He stopped growing when he was nine years old and is being fed on a special diet. John is so small special gloves and suits had to be made for him. Here we see the little fellow with a six-foot porter as he has his first glimpse of the British capital from the hotel roof.

Money In Sugar Beets

Good Source Of Revenue For Many

From the Canadian papers prepared for the conference of the Institute of Pacific Relations held at Banff last year there has been reprinted in pamphlet form an interesting article on the sugar beet industry of Alberta. It is well written by Mr. D. W. Buchanan, son of Senator Buchanan, publisher of the Lethbridge Herald, and no doubt represents the writer's close personal acquaintance with his subject.

The sugar factory at Raymond, Alberta, operates of course, on sugar beets. In 1932 the plant, working 120 days, produced 45,000 tons of beets, or 300 pounds per ton. Producers had an average yield of eight to nine tons per acre and received in flat price and bonus, about \$6 per ton.

"Comparative success," says Mr. Buchanan, "in the planned production of sugar beets has been achieved." Many farmers in the irrigated area around Raymond, confronted with lower cereal prices, have found in sugar beets "a permanent and relatively stable source of revenue," and so the Raymond plant is making its contribution to the economic stability of Alberta.—Ottawa Journal.

Mascot Of Manitoba Fliers

Ginger-Colored Cat Appears To Enjoy Air Travel

The "mushroom" settlement of Ilford, Man., Mile 286, Hudson Bay Railway is the gathering place of rovers of the world, and Miss Tam Fathchild Junkers, the Canadian Airways ginger-colored cat, is no exception to the rule. Tam is only six months old but she is the most highly travelled debutante among the Ilford cats.

Tam was born in Winnipeg last summer. Her first trip was by steamer from Selkirk to Norway House. Then Capt. H. Hollick-Kenyon, superintendent for Canadian Airways in Northern Manitoba, took Tam for a trip to Island Lake.

From there the fliers carried her to God's Lake gold fields. Then one day while Tam was exhibiting feline curiosity around the ships, one of the airman bundled her aboard, and Tam was treated to a fast ride to Ilford.

For the last few weeks Tam has spent her spare time chasing squirrels around the airways cookhouse on the shores of Moose Nose lake. Bill Pitt, the "flying chef" and personal friend of Tam says she expects to spend her summer holidays at her home in Winnipeg.

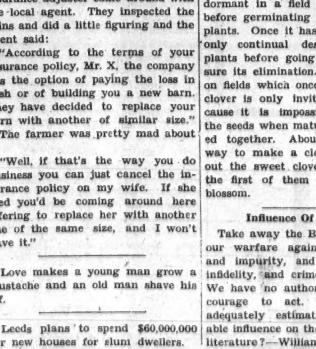

Germinates After Long Time

Nature Takes Precautions Against Extinction Of Sweet Clover

Sweet clover seed will remain in the ground for years without germinating and farmers are inclined to think that the plant has disappeared. This long life is one of Nature's precautions against the total extinction of the plant. There are cases on record of sweet clover seed lying dormant in a field for eleven years before germinating and sending up plants. Once it has been introduced into continual destruction of the plants before going to seed will insure its elimination. Sowing alfalfa on fields which once produced sweet clover is only inviting trouble, because it is impossible to separate the seeds when matured and harvested together. About the only safe way to make a clean-up is to pull out the sweet clover plants just as the first of them are coming into blossom.

Influence Of The Bible

Take away the Bible from us, and our warfare against intemperance, and impurity, and oppression, and idleness, and crime is at an end. We have no authority to speak, no courage to act. Who, then, can adequately estimate its immeasurable influence on the world's greatest literature?—William Lloyd Garrison.

Will Lead Expedition

Following in the traditions of his father, Edward Shackleton of the Oxford University Expedition Club, is expected to lead a scientific expedition into the Canadian Arctic this summer. His father, Sir Ernest Shackleton, was famous for his Antarctic trips.

New German Coins

The first German coins bearing the Nazi swastika emblem, in addition to the German eagle, have been placed in circulation. They are two and five mark silver pieces bearing the inscription, "The common weal before self-interest."

Many a man is judged by the clothes his wife wears.

"But surely you heard me sound my horn?"

"There you are, Edna! I've won. It wasn't a cuckoo!"

—The Humorist, London.

Dominion And Provincial Governments Are Co-Operating For Protection Of Waterfowl

Good Friend To Man

Dairy Cow Breeders Very Efficient Service To Humanity

At a banquet in Ontario of the Halton and Peel Holstein Breeders' Association an interesting item on the program was a toast "To the Dairy Cow." Some time ago at a similar function in Brampton a champion milk cow was guest of honor in the banquet hall and munched contentedly on a ration of hay while orators extolled her virtues. There is something nice about such incidents. Even though the dairy cow remains unaffected by speeches in her honor, it is well that man should acknowledge publicly the quiet but efficient service she is rendering humanity.

The cow—whether thoroughbred or just ordinary—is worthy of a toast any day; and there is the assurance that she will not weary the banquet guests with a long acknowledgment of the compliments paid her. The cow is the philosopher of the animal kingdom. She is all for the simple life, and is disposed to be contented with little. Obscure her life, open countenance, indicating disposition in which there is no guile. She does not know anything about nerves. Where there is a more complete picture of repose than that presented by a well-fed cow at rest in the shade of her pet tree in the pasture field, and chewing rhythmically the cud of contentment?

But when milking-time comes she will be in her place in the barnyard, moaning an intimation that she is prepared to discharge her full duty, that the family may have milk and butter, with butter-milk thrown in for good measure.

So let the good old dairy cow be toasted. She is among man's best friends, and the very particular friend of little children. May the pastures be luscious in summer, and winter let her be plentiful and the bran mash seasoned to her taste. Ladies and gentlemen, "The Dairy Cow!"—Toronto Globe.

Work Of The Rural Teacher

No Extra Pay For Many Self-Denying Duties

If every teacher received extra salary for working overtime a great deal of money would change hands, suggested Miss Alice C. Dresser, a former president of the Provincial Association of Protestant Teachers, in addressing the Manitoban. A great part of the work of a country teacher, especially, is impossible to measure, she remarked, for it might be termed as continuous performance.

It is generally acknowledged today that more people should live on farms, and that the more attractive country life can offer the better for the province, she said. Organizations to some extent provide a solution for the problem of loneliness of country life but often the difficulty is to find a leader.

That leader, said Miss Dresser, is generally the teacher. The community regards this service as part of the teacher's work, added the speaker, in describing the manifold activities into which her services are likely to be pressed.

Celery In Forefront

From Small Beginning It Has Become Great Industry

From a humble trench or two in the cottager's garden, celery has risen to the forefront of horticultural industries. One British railway alone carries 42,000 tons in a season of which 18,000 north is consumed in London. Although the bulk of the crop is marketed between October and March, the celery season officially extends from August to April. The Cambridgeshire Fenlands are the generally recognized centre of the industry. Farther north is the celery Isle, the Island of Axholme in the extreme northwest of Lincolnshire. Bounded by the rivers Trent, Don, Torne and Idle, practically the whole of this low-lying tract of land, about eight miles long by five miles broad, is devoted to celery cultivation. Another celery centre lies between Haisall and Preston in Lancashire, the soil there being of the peat moss variety. A constant supply of organic matter is the main essential of successful celery farming. This district is reputed to be the birthplace of the industry. The Lancashire growers having passed on the secrets of intensive culture to other counties.

Proved To Be Economy

Addressing a Montreal gathering, R. Watson Sellar, controller of the treasury, Ottawa, recognized the client in which economy, extravagance proved to be economy. The superintendent of the mint asked for a new doormat. After many requests he got it. The old one had lasted 15 years and was saturated with flakes of silver gold dust. It was carefully burned and its contents melted down yielded \$20 in gold. The new mat cost \$1.

Proof Positive

"I believe," said the chery philosopher, "that for every single thing you give away, two will come back to you."

"Yes, that's true," said his listener.

"Last fall I gave away my daughter, and now she and her husband have both come to live on me."

Japan's Army Of Occupation Officers In Manchuria Are Shaving Their Heads German Style

Canada has had remarkable success in conserving her native wild life and the status of the return of the buffalo and preservation of the antelope and wapiti have won the commendation of game conservationists throughout the world. In the realm of bird life success is also attending the co-operative efforts of Dominion and provincial government officers.

The efforts being put forth to re-establish the trumpeter swan, the greatest of North American waterfowl, have been carried on so far with little or no publicity. The trumpeter swan, formerly bred in British Columbia and the Great Plains region of Canada, as well as in the northern part of the plains region of the United States. It was certainly more southern in nesting range than the other North American swan, the whistling swan. The latter continues to exist in great numbers while the trumpeter swan has been depleted to a dangerous extent. Both species of swan have been given protection under the Migratory Convention Act which in Canada is administered through the National Parks branch of the department of the interior. The act has undoubtedly helped to replenish the numbers of whistling swan, and to save the trumpeter swan from extinction.

The Department of the Interior, Canada, in co-operation with the Provincial Game Departments of Alberta and British Columbia, has been especially active in protecting the trumpeter swan. In several places in southern British Columbia these birds have found a wintering place and wherever flocks of them have been given the protection of special patrols when they were on these wintering grounds. In spring they retreat to remote sections to breed, and the fact that cygnets appear in the wintering flocks is a hopeful sign for the perpetuation of the species.

The maximum population for the species on its wintering ground in British Columbia is believed to be of the order of five hundred individuals. The birds are being lived, and if given the consideration they deserve from man the species may be saved from extinction. When a species becomes reduced in numbers, and in range, every factor seems to be against its recovery. For example, the loss of a few birds, or even a single individual, may be a loss which is unavoidable, or by thoughtless shooting, undoubtedly has a more serious effect upon a species in this condition than upon species which have not been depleted. The question of whether this stately member of our waterfowl will be saved from extinction or not depends entirely on the action of the people of Canada, for it is in Canada almost entirely that the species now makes its home both summer and winter.

Trade Cattle For Coal

Fairies Might Obtain Welsh Anthracite Through Bay Route

A new argument in support of the Hudson Bay route to and from England has been discovered: The English weekly, Canada, quotes some of its contemporaries as foreseeing a time when the importation of Welsh anthracite to the prairies via the Hudson Bay route will capture the trade from Pennsylvania to the value of \$75,000,000. "Although such anticipation is, of course, exaggerated, it is quite possible that an important trade in Welsh anthracite may be built up through this route, and in return foodstuffs, timber and ore may be shipped to Wales." The shipment of Western Canadian lean cattle to Welsh ports for fattening is advocated in exchange for returned cargoes of Welsh coal for Western Canadian use.—Toronto, Mail and Empire.

Time For Amendment

Law Giving Lottery Winnings To Informer Seems Abundant

Lotteries are illegal, but tickets are bought in large number, and winnings are paid. If parliament thinks it is against public policy to permit the winner to retain the money it should be forfeited to the Crown, but in any event we should not sanction longer the present hypocritical and distasteful attitude.

As between the morality of a person who secures a sum of money from a lottery ticket for which he has paid, and the other person who sees as a "common informer" and keeps—those money are quite sure most people will have no difficulty in making a choice.—Ottawa Journal.

Forget The Past

Too traditional British attitude towards former enemies is to forget the past and to clasp hands in friendship and camaraderie. The war had been over for many months before ex-members of the German army were being received as cordially in London as in the days before the great struggle. Nightly or wrongly, such has been the British policy for many generations.

No Surplus Of Durum

Durum wheat has not contributed to the world surplus, as it is exported chiefly to one country, Italy, and it is the only kind of wheat sent to Italy, where it is made into macaroni and spaghetti. Records show that 1,003,000 acres were sown to durum wheat in Manitoba in 1

LADIES' GOLF NOTES

The Annual Meeting of the Ladies' Auxiliary was held on Friday, May 4th at the Club-House. There was a gratifying number of members present, and some new players as well. After tea was served there was a short business meeting, at which the following officers were elected:

President: Mrs. E. C. Chapman.
Vice-President: Mrs. McCaughy.
Sec.-Treas.: Margaret Morrison.
House Committee: Mrs. Locke and Mrs. Hay.

Tournament Committee: Miss Pratt and Miss McClary.
Tea Committee: Mrs. Fraser and Mrs. Sweet.

Men's Tournament Refreshment Committee: Mrs. Gilmour and Mrs. Teare.

Plans were made to hold the regular mixed Tournament and Silver Tea on the first Wednesday in June. Further announcement will be made about this.

Anyone wishing to join the verandah Bridge Team are asked to be present on Friday afternoon. The fee this year is two dollars each.

All golfers who have not yet given their names to Mr. Jackson are asked to do so at once, as he wishes to complete list of golf members for this year as soon as possible. Please attend to this now.

The Tournament Committee will be making draws for the Friday games, and all golfers are asked to cooperate with them in making these draws successful. If you will not be golfing on Friday, the committee would be grateful if you would notify them in order that the draw may be made without your name, and so avoid confusion. These tournaments are yours, and it is up to you to make them or break them. Draws will be posted in the Club House well in advance.

Let Us Make This a Banner Year.

THE CHURCH OF ENGLAND IN CANADA

Diocese of Calgary
St. Cyprian's Church Lacombe
Rector: The Rev. T. H. Chapman.
Telephone 165

May 13, Sunday after Ascension Day
9:00 a.m. Sunday School.
11:00 a.m. Morning Prayer and Sermon.

7:30 p.m. Evening Prayer and Sermon.

TO BE KEPT IN MIND: Wednesday, May 16th marks the 40th anniversary of the formal establishment of this Parish, and the Special Services of Commemoration and Thanksgiving will be as follows: 8 a.m. Holy Communion. The Parochial Officers (Vestry) together with the officers and members of all Parish Organizations, are especially requested to make this service a corporate act of Thanksgiving. Everybody welcome.

8:00 p.m. Special Evensong. The Ven. Archdeacon Tims, D.D. of Calgary will recount some of his experiences as an early pioneer of the church in this Diocese and Province. Everybody welcome.

May 26-27—The Diocesan-wide Rally and Conference of Young People (18 and over) in Calgary.

FILM AND ALICE BRINGS TO LIFE STORY CLASSIC

Charlotte Henry, the fortunate young lady who won the coveted role of "Alice" in Paramount's "Alice in Wonderland," from more than 7000 applicants entered in that company's international search, can be seen at the Avalon Theatre this week for this pictorialization of the Lewis Carroll fantasy starts tonight.

As "Alice" Carroll's immortal heroine Charlotte Henry encounters in the film the same experiences met in the book. But the screen Alice has one up on the book-girl, because all the chessmen, Father William and the Cheshire Cat and all the other famous Carroll figures are portrayed in the picture by favorite Hollywood stars.

Among the more important screen stars appearing in "Alice in Wonderland" are Richard Arlen, Roscoe Ates, Gary Cooper, Leon Errol, Louis Fazenda, Y. C. Fields, Skeets Gallagher, Cary Grant, Raymond Hutton, Edward Everett Horton, Roscoe Karns, Baby LeRoy, Mae

Marsh, Polly Moran, Jack Oakley, Edna May Oliver, May Robson, Charlie Ruggles, Alison Skipworth, Ned Sparks and Ford Sterling.

Coming Double Feature, Zane Grey's "Last Trail" and Joe E. Brown in "Son of a Sailor," May 17, 18 and 19.

4 Marx Bros. in "Duck Soup," May 24, 25, 26.

BAPTIST CHURCH
Sunday is Mother's Day.
Special services will be held:
Morning at 11 a.m. Mrs. Scherzer will speak to the Church School.
Evening at 6:30, Rev. Isler will tell stories about mothers to the Juniors.
Evening at 7:30 address on "Mothers of Great Men."
Special music.
The mothers of the members and friends of the B.Y.P.U. are invited to attend the meeting, Monday evening at 8.
Miss Joan Ford's Group will be in charge.

Friday, the 11th, the young people will hold a birthday social. Entertainment, games and refreshments will be provided. Bring one cent for every year of your life. The money will be used in paying the expenses of as many young people as can go to the Summer Convention at Gull Lake.

The Alexandra Chapter 4, order of Eastern Star, are holding a tea in aid of the Junior Red Cross on Saturday, May 19th, at the home of Mrs. R. L. Ramsay. Time: from 3 to 6.

It's poor policy to save on the first cost of a Cross Separator and then lose money twice a day forever after. See the New DeLaval at Morrison & Johnson, Ltd.

Mr. and Mrs. Fleming Gilmour, and family, of Edmonton, spent the week-end visiting Mrs. D. Gilmour. Mr. Beacom, manager of the Bank of Montreal, Hughenden, was also in the party.

The annual recital by pupils of Mrs. F. H. Reed will be given in the United Church on Wednesday evening, May 30th. The assisting artist will be Miss Eleanor Agnew, violinist of Edmonton, Miss Helen Barbour, accompanist.

A visit to Lacombe's new Greenhouse would be of benefit to anyone contemplating putting in flowers of every sort, or garden plants. This new greenhouse is an acquisition to the town and deserves support. It is situated south of town on the Edmonton Trail, near the Experimental Station. For your garden sets, be sure and visit this greenhouse.

WORLD HAPPENINGS BRIEFLY TOLD

David Lloyd George recently completed 44 years' unbroken service as member of the House of Commons for Carnarvon.

Train wreckers detailed the Vienna-Paris-London express between Wals and Linz, capital of upper Austria, causing two deaths and a score of injuries.

"Amps" throughout the Dominion will mourn the death of Sergeant Richard Wilkinson, 46, past president of the Appointments Association, in the Christie Street Veterans' hospital, Toronto, recently.

"No such action has been taken," was Premier R. B. Bennett's reply in the House of Commons to a question if the government contemplated signing an air mail contract with Canadian Airways.

Lights or reflectors on all horse-drawn or other vehicles operating on main or secondary highways are required in a bill to amend the Vehicles and Highway Traffic Act, 1924, which has been introduced in the Alberta legislature.

Royal Canadian Mounted Police officers will be placed in railroad yards shortly to discourage the wanderlust among those foot-loose persons who wish to do their spring travelling on the "rods," it was learned.

The 10 per cent. income tax imposed on judges, officers of the military, naval and air forces, and of the Royal Canadian Mounted Police, is continued for another year in a bill which received first reading in the House of Commons.

United States exports to Canada for February totalled \$10,601,987 against \$11,500,787 in the same month last year, the United States department of commerce announced. Imports from the Dominion for the month were \$14,163,439, against \$8,530,394 last year.

Withdraws Offer Of Million

Lady Houston Thinks London Is Neglecting Air Defence

An offer of \$1,000,000 towards the air defence of London was withdrawn by Lady Houston, wealthy air enthusiast who backed several Schneider cup efforts, with a gesture of rage at Prime Minister Ramsay MacDonald for his "contempt."

"I alone have dared to point out the dire need for defence of London," she wired the prime minister. "You have muzzleed others who have deplored this shameful neglect. London is the only capital in Europe without any air defence. You have treated my patriotic gesture as a contempt such as no other government would have been guilty of towards a patriot."

Was Once Populated

French Scientists Find Rich Art Treasures On Sahara Desert

Professors Gautier and Reygasse of Algiers University reported they had found indications that a civilization, now lost, once flourished in the Sahara desert. The two French scientists returned from an exploration of the Tassili des Ajer region 30 miles south of Fort Polignac to say they had dug, from the barren sands, rich art treasures. They said, included rock paintings and carvings with stone axe axes and tools.

Income Tax For Oppies

Gypsies in England must pay an income tax. Assessors and collectors recently visited the nomads' winter encampments and demanded the tax. Where they found a newly painted caravan, with bright curtains and grinning prosperous appearance they refused to accept a statement of income that they thought too low. They collected the tax before they left.

The London area alone contains over 200,000 registered private automobiles.

The coolest spot in the ice-box is directly under the ice-chamber.

Gardening

Now Is The Time To Think About The Flower Garden

Along borders and in front of flower beds it is best to have something tiny and one of the very best for this purpose is Alyssum. This grows a few inches high and when once started defies drought, weeds and general neglect. It bears a profusion of tiny white flowers, beautifully scented. When seed pods start to appear the plant can be shared back as inch or so with clippers or even a lawn mower and in ten days another crop of flowers will start. Like the poppy the seeds are very fine and to insure thin, even planting, it is well to mix with a little dry sand and sow the mixture.

Another attractive dwarf flower and as easily grown is the portulaca. This is a wonderful thing for hot, dry corners. The waxy flowers come in several bright colors. A little larger and also a continuous bloomer is the Calceola or pot Marigold. The plant is bushy and reaches a height of eight to twelve inches. Foliage is dark green and the large flowers are orange and yellow. The California Poppy is a single, a golden yellow and almost two inches across. Clarkia, Larkspur, and Marigolds are larger plants, but all are showy and easily grown. These three require from a foot to 18 inches between plants and should be planted about three inches apart. At the back, or for use as screen one can plant Cosmos and Sunflowers. These are late bloomers coming in in August and September. The garden sunflowers are much more ornamental than their cousins out in the corn field. Then there are Nasturtiums, Pansies and Sweet Peas which are well known. Most of these things are planted just as soon as the soil is fit to work, but any good seed catalogue or the packets themselves contain cultural directions.

As soon as the ground is ready, one may get in the first vegetables and flowers. In the vegetable line, sow these things of which the leaves are eaten. These include Lettuce, Cress, Spinach, Radish, Mustard and Peas. There are also plants to be planted when the soil is as warm as when the plants are to be sown. Next in line will be those bulbous or root vegetables such as Beets, Onions, Carrots, Early Turnips and Parsnips. At this time the first of the Potatoes are planted and although they are not one of the others mentioned they are not susceptible to frost until the plants go through the ground which will be in from a week to a fortnight after planting, depending upon weather conditions. Repeat planting of practically all of the early vegetables every ten days until about the middle of June so that the harvest season for these will be extended. In the third planting group will come the really tender things, such as Tomato plants, Melons, Cucumbers and Egg Plants which are best kept indoors or under until all danger of frost is over. Among the hardiest annual flowers are the Calceola, Candytuft, Alyssum, California Poppy, Cosmos, Calliopsis, Larkspur, Poppy, Linaria, Virginia Stock and Sweet Peas. The latter must be sown as early as possible. After danger from frost has practically disappeared, Zinnia, Nasturtium, Aster, Stocks, Balsam, Snapdragon, Marigold and Gladiolus may be planted. Double and single stocks and Sweet Peas. The latter must be sown as early as possible. After danger from frost has practically disappeared, Zinnia, Nasturtium, Aster, Stocks, Balsam, Snapdragon, Marigold and Gladiolus may be planted.

"It alone have dared to point out the dire need for defence of London," she wired the prime minister. "You have muzzleed others who have deplored this shameful neglect. London is the only capital in Europe without any air defence. You have treated my patriotic gesture as a contempt such as no other government would have been guilty of towards a patriot."

Is A Westerner

Don Copeland Becomes Manager Of C.R.R. Local Station

"Don" Copeland, as he has become popularly known throughout Canada, assumed the duties of manager of Station C.R.R. recently.

Mr. Copeland is a westerner, having spent the large part of his business life in Western Canada, as farmer, surveyor, lumber salesman and railroad.

He went east just before the era of broadcasting and in 1926 became connected with Station C.R.R. The Universal Radio Company of Canada, then the finest and most modern transmitter in Canada.

From there he went to CKWG and recently began his radio career.

A comfortable house for poultry does not necessarily mean a warm house, but it does mean a dry well-ventilated house where no moisture adheres to the walls.

Scotland's population, according to the last census, consists of 2,326,000 males and 2,517,000 females.

There are 225 different kinds of tortoises and turtles, including land, freshwater and marine species.

Chose Strange Career

Nurse Looking For Thrills Took Up Animal Training

Twenty-one years ago a young, graduate nurse looking vaguely for some more attractive career idea watched a traveling carnival barker, Stark, the "Tiger Woman" of circus and motion picture fame then was launched on her career as an animal trainer.

For the last 21 years she has been at it, cracking her whip over scores of tigers, panthers, leopards, jaguars, and lions; facing death numerous times, but, if you were to believe her, she has not yet become a complete success.

"I have never yet conquered an animal," she asserts. "The moment I become over-confident, feel that I have an animal thoroughly under my domination, I become just the least bit careless—and find myself in the hospital." Her slender body bears the marks of many tiger teeth and leopard claws. And never once, she declared, was the animal to blame. "I simply relaxed my vigilance," is her explanation.

Appearing in 1928 with a circus at Bangor, Maine, she was putting her 15 tigers through their routine. It had been raining—a danger signal to animal trainers, for tigers are at their best when the ground is wet. The first part of the act went through without mishap. Miss Stark gained confidence.

But, suddenly, as she started to walk between two animals, perched upon pedestals, she slipped on a patch of wet earth. Down she went and before she could arise, two snarling beasts were upon her. They broke one of her legs, tore her shoulder muscles and mutilated her scalp. Miss Stark fought her way free, cracked her whip and fired several blank cartridges. The tigers snarled for a moment, then leaped back onto their pedestals. Miss Stark stumbled from the arena and collapsed. "Some day one of my animals will get me," she admits, "but if so, it will be nobody's fault but my own."

Miss Stark has made some interesting observations concerning animals during her years of association with jungle beasts. "The common belief that the slightest hint of human blood enrages an animal is no such myth," she said. "And there are no 'good' animals. You can work with them from birth on, then suddenly they'll turn on you."

Surprises Students

Questions Veracity Of University Professors In Giving Lectures

Prof. C. C. Hart, head of the botany department at the University of Western Ontario, caused considerable consternation among students in general at the college when he told a class that every professor tells from eight to 18 dozen right lies during the course of each lecture.

"The trouble," said the professor, "with most students is that they take in everything told them, not excluding lectures. For instance, every professor tells from eight to 18 dozen right lies during the course of each lecture. And you take them all in, like suckers."

"Furthermore," he added, "most text books contain on an average of 120 mistakes or false statements."

After further developing this theme, the lecturer advised them that when and if the class graduates, the members would know as much as the average text writer.

Value Of Detector Car

Moving along at the rate of about seven miles per hour, the "transverse fissure detector car" not only locates invisible flaws, but also paints marks the rails, makes an ink record of defects and even tells whether the defects are large or small. The value of the detector car is in locating the hidden rail defects of interior origin—flaws, crystallization, fissures, or other imperfections which grow under continued traffic.

Models of ships in bottles are just becoming popular as ornaments in London.

Soured On THE WORLD?—THAT'S LIVER

Wake up your Liver Bile

—No Calomel necessary

Many people who feel sour, sluggish and out of sorts, are in need of a little of the little bottle of Liver Bile. It is the best and most reliable way to get your liver back into shape. It is the only way to get your liver back into shape. It is the only way to get your liver back into shape.

Cherry's Little Liver Bile will soon get you back into shape. It is the best and most reliable way to get your liver back into shape. It is the only way to get your liver back into shape.

Little Journeys In Science

SUGAR FROM WOOD

(By Gordon H. Guest, M.A.)

Science has recently amazed the world by making chocolate from ordinary kindling wood. This feat was accomplished by a famous German chemist, Professor Friedrich Bergius, after ten years of experiment in his laboratory. This chemist has perfected a process for making sugar from ordinary lumber and he claims that this wood sugar is sweeter and healthier than ordinary cane sugar. He also maintains that in countries where wood can be obtained in large quantities, such as the Baltic States, Roumania, North-west United States and Canada, wood sugar can be produced more cheaply than cane sugar is produced in the countries located in the torrid zone.

A small factory has been constructed in Germany which commenced operations last May and can produce from 6,000 to 8,000 tons of pure sugar per year from wood. Finely ground and dried wood is treated with muriatic acid until a syrup is obtained. This syrup of molasses is then boiled to drive off the acid and a further step in the process changes it into wood sugar. The sugar obtained at this stage can be used, as can also the molasses, as a fodder for animals, for making yeast, for the production of alcohol, and for other purposes. Another step converts the wood sugar into chemically pure grape sugar, which can be used in the candy industry, replacing cane or beet sugar.

This sugar derived from wood is healthier than cane sugar because it consists only of glucose, which is commonly called grape sugar. Glucose is absorbed by the human body at once, whereas cane sugar must be first changed into grape sugar. Thus, there is less strain on the body in using glucose rather than cane sugar. Glycerine, acetic acid and pure mineral alcohol are also being produced from wood. In addition a new kind of saw dust has been introduced in Germany for use in bars. This saw dust is a by-product in the making of wood sugar.

Recipes For This Week

(By Betty Barclay)

CHEESE BISCUITS

2 cups sifted flour
2 teaspoons double action baking powder
1/2 teaspoon salt
1/2 cups butter or other shortening
1 cup grated American cheese
1/2 cup milk

Sift flour once, measure, add baking powder and salt and sift again. Cut in shortening and mix. Add milk all at once and stir carefully until all flour is dampened. Then stir vigorously until mixture forms a soft dough and follows spoon around bowl. Turn out immediately on slightly floured board and knead 10 seconds. Roll 1/4 inch thick and cut with 1 1/4-inch floured biscuit cutter. Bake on ungreased baking sheet in hot oven (450 degrees F.) 12 to 15 minutes. Makes two dozen small biscuits.

HODGEPODGE FUDGING

1 cup orange pulp, diced
1 cup apples cut fine
1/2 cup broken walnut meats
1/2 cup seeded raisins, chopped
1/2 cup orange juice
1/4 teaspoon ground cinnamon
1 cup sugar
4 tablespoons bread crumbs
1 teaspoon butter

Mix all ingredients except butter. Put into buttered baking dish, dot top with bits of butter and bake covered in a moderate oven (380 degrees F.) until apples are tender. Apples are very dry, increase the amount of orange juice slightly. This is a pudding boys like.

Makes Record Speed

London-Liverpool Train Averages Sixty Miles An Hour

A train hauled by the Princess Royal, Britain's biggest and most powerful locomotive, has beaten the record for scheduled trains on the 193 1/2-mile run from Liverpool to London.

The run took three hours, 12 minutes, an average of more than 60 miles an hour. At one point the train reached a speed of 85 miles an hour.

Boy Runs Own Gold Mine

Seventeen-year-old Michael MacDonald has managed his gold mine in Rhodesia so well that he will enlarge it. He employs a dozen natives and is getting nine penniesworth of gold from a ton of ore. He is adding a battery of stamps to work his ore on the spot.

Smoking Is Temporary Substitute For Food Sticks Chicago Doctor

And all this time we have been thinking that to light a cigarette and puff on it was smoking. But people who smoke cigarettes are really eating.

Smoking is to an extent a substitute for food, according to Dr. Jas. H. Hutton, Chicago endocrinologist, who described how the adrenal glands can operate to release excess sugar stored in the muscles and liver.

Of course, a cigarette will never take the place of a juicy steak, but long experience verifies Dr. Hutton's findings. Here is how it works: Nicotine is absorbed into the system, and reaches the adrenal glands. The glands get excited by the drug and secrete adrenalin, a hormone. The adrenalin then releases quantities of sugar stored in the body as starch.

The excess sugar can temporarily relieve hunger or fatigue.

Dr. Hutton explained how successfully adrenalin can mobilize sugar reserves. Normally, he said, there are from 80 to 120 milligrams of sugar in the blood and the use of adrenalin can increase this amount to 180 milligrams.

Now Used For Medicine

Halibut Livers Once Waste Product Bring Good Price

Approximately 20,000 salmon in Nova Scotia will be affected by the new offer made by a Toronto drug firm for halibut livers at 15 cents per pound. Information of the increase in price of and demand for these livers was received by A. J. Fraser, manager of the local branch of J. R. Poole Company, fish packers, and the new price goes into effect at once.

Last year the Toronto company purchased the quantity of halibut livers at 12 cents per pound for use in the manufacture of their products. Evidently their experiments were successful, for they now require as great a quantity as can be secured. Until this company started buying the livers they were thrown away as useless. Now they are regarded as a valuable by-product, nearly as valuable as the fish itself.

A short time ago a load of these halibut livers went out from Lacombe that netted \$285 for material that a year ago was dumped overboard.

Latest Means Of Transport

Aero-Sleigh Is To Undergo A Thorough Test

A thorough test of the aero-sleigh, one of the latest forms of transport, is to be made on a journey of about 1,500 miles through some of the bleakest country in all the world. The form of the aero-sleigh is the body of an aeroplane mounted on skis, with an engine driving a propeller at the rear. It has no wings, and so does not rise from the ground. Twenty-five of these machines are about to leave Leningrad on an expedition that will penetrate the cold and desolate heart of Northern Russia to under the auspices of the Soviet Society for the Promotion of Motoring and the Improvement of Roads.

Open Show From 'Plane

Diving 3,000 feet in an airplane 12 London schoolboys helped by radio to open the Schooboy's Own Exhibition in London recently. They had traveled from Romford, and as the craft dropped from 5,000 to 2,000 feet altitude a boy's voice transmitted by radio telephone to a loud speaker in the court of honor, asked on behalf of all the flyers that the president open the show.

As It Should Be

Children born in Canada can only now be designated on their birth certificates as Canadians. The registration of birth from last year has been changed to provide a space wherein the child born in Canada may be designated as a Canadian. In addition, a place has been included in the form to set out the nationality of the father and mother of the child.

Maturity-Maternity

MIDDLE AGE

At these three critical periods a woman needs a medicine she can depend on. That's why so many take Lydia E. Pinkham's Vegetable Compound. 98 out of 100 say, "It helps me!" Let it help you, too.

Iceberg Patrol Starts

Close Watch To Protect Ships Will Continue Until July

The memory of the greatest sea tragedy of modern times, the sinking of the Titanic, crept again into the minds of all men connected with the North Atlantic as the United States coast guard inaugurated the 1934 iceberg patrol.

A tiny, white vessel, the General Greene, of 250 tons displacement, ploughed northward out of Boston to ward the ice fields.

Two other vessels, the Mendota and Pontchartrain, each with eight officers, a doctor and 75 men on board, received orders to stand by at Norfolk.

From New York went out a warning, calculated, coast guard officials said, to give the shippers of all ships "a case of genuine jitter." "Watch for critical ice conditions."

For all seem this message has the same meaning—the most dangerous time of the year on the North Atlantic has started.

From now until July, extra watches will stand on the bows of trans-Atlantic liners; day and night, sailors will test the temperature of the water; and constantly the captains of great vessels will keep in touch with the ships of the coastguard, patrolling the ice.

All vessels during the next three months will alter their courses 50 miles southward.

"The most critical area is an equilateral triangle with legs 175 miles long—off the Grand Banks. The west and southern legs of this triangle lie within the shipping lane."

From a study of meteorological conditions prevailing during the winter, Lieut.-Commander Edward H. Smith predicted "shipping may expect a heavier ice year this season than usual."

He expects about 630 icebergs will drift southward.

Industry Affects Flaxseed

Conditions Would Warrant A Moderate Increase In Flax Production

The flaxseed situation is closely related to industrial activity in Canada, and to the construction industry in particular. According to the Agricultural Situation bulletin, issued by the Dominion Department of Agriculture, the revival of flaxseed production dropped to the lowest levels in over twenty years, was unduly restricted and that a moderate expansion in areas suitable to flaxseed production would be warranted. A marked improvement in flaxseed prices has taken place during the past year.

One of the worst stings of defeat is the sympathy that goes with it.

How are Your Nerves?

Mr. K. Waldron of 40, St. James St., Hamilton, Ont., writes: "I have been in the habit of taking Dr. Williams' Pink Pills for Pale People. I have been feeling much better and my nerves are much improved. I have been feeling much better and my nerves are much improved. I have been feeling much better and my nerves are much improved."

OCCASIONAL WIFE

By EDNA ROBB WEISTER

Author of "Joretta," "Lipstick Girl," etc.

SYNOPSIS

Camilla Hoyt and Peter Anson, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her. Peter is a young, struggling sculptor trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so studies commercial art in the hope of finding an agency job. Others in the story are Avie Worth, another wealthy girl who is trying to win Peter, Sylvia Todd, Peter's model, and Gus Matson, his former roommate with whom he has quarrelled. At a party at an exclusive club Peter, entertaining Camilla's guests with impersonations. When the rest of the members of the party go to a cabaret to continue the party, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avie and another boy are standing near them. This makes it necessary for Camilla to announce before the party that she and Peter are married. Bowman and Weeks, an advertising agency, where Camilla has submitted some of her work, send for her and offer her a salary of \$500.00 a month to start and a prospect of having it doubled. She tells Peter of her good fortune in securing employment. Mrs. Hoyt is also informed that Camilla has obtained work and is going to leave the Hoyt household. Avie Worth rents a studio on the same floor as Peter, and invites him to have lunch there. He accepts reluctantly, but is favorably impressed with his visit. Camilla urges Peter to accept some of her earnings to help him along, but Peter refuses and they quarrel.

(Now Go On With The Story)

CHAPTER XXXIX

Peter dismissed Avie's suggestion that she "invest money in his future," with, "I couldn't do that. It's awfully sporting of you to offer and I appreciate your confidence in me, but it wouldn't be fair to borrow money from you just because you are a good friend."

"You would consider a loan from a stranger, if he would take the risk?"

"I might, I know that I could pay it back something, whether I make it at sculpturing or not. I certainly don't expect to be broke for always."

"Then let me back you for a trial. I'd love to be interested in your progress and see you win out." She did not plead or attempt to influence him with a personal appeal. Only her words were persuasive.

After a short silence, he asked abruptly, "Why are you interested in me?"

Her head was thrown back against a cushion and she looked at him from beneath lowered eyelids. Her lips curved slightly with amusement. "Because I like you," Avie admitted. "And, as I said, because I believe in your ability, and have money to invest in a good thing when I see it. And any more reason?"

"Is that all of them?" soberly.

"All I can think of at this moment," she laughed and tossed a cushion at his head. "You're a funny

ing your work for the sake of a little expense, you will get nowhere. As for seeing Paris, it will be an unattainable for you as the moon."

Finally, Peter returned to his room with a check for one thousand dollars and a mingled sensation of vexation, relief and satisfaction. He had insisted upon signing a temporary legal form of his own writing, on which were specific terms and figures.

His gratitude was pathetically genuine when he thanked her. "This is awfully decent of you, Avie. I'll never forget it, either."

"Not even when you have become famous?" she asked playfully.

"Especially then," he promised.

"This is going to make a lot of difference in my work."

"Of course it will. That is why I wanted you to have it. Forget your troubles now, and finish the new figure on time for the exhibit. Then, we shall celebrate."

"With a big party right here," she looked to suggest a more private celebration, but dared not. She had been too successful thus far in her plans to forego reckless now.

She closed the door after him and leaned against it, her head thrown back, dreamily. With Peter in Paris, the Louvre, the Place de la Concorde, the Jardin des Tuilleries, the Luxembourg—the paradise of pleasure seekers, the luxury of art and culture—what a place for romance and subtle intrigue, given the right conditions. And, Avie, who would have them right at her fingertips!

Poor, dear, guileless Peter, who believed he was so wary and shrewd. How like a man to be so easily deceived by deception and so suspicious of sincerity. He would accept money from the woman who was determined to win him at any cost, and obstinately refused to allow his wife to help him even a little. While he was made to feel that he was a scoundrel as Camilla did, but his responses had never justified her, his audacious campaign for his favor.

Peter closed his own door and stared down at the check. It was more money than he had dreamed of possessing for a long, long time. He looked over it at the same time he considered the fact that Camilla said he could take care of himself. Nothing ever had angered him so as her patronizing manner of that afternoon. And there is nothing like being angry with the woman he loves to make a man's brain lose its balance.

The Spirit of Eighty-Two

Woman Has Organized Club To Interest Old People

Nobody under the age of 61 may join San Francisco's newest club. It has been organized by Dr. Lillian J. Martin, aged 82. She hopes to give new life to old people by giving them social welfare work to do. The movement will also act as a counterforce to the "wild young men" and thirty-five grey-haired men and women who came to the first meeting received orders to survey the city of San Francisco. The first trip out of the city was to a trip round the world for mental stimulation at 77; toured Soviet Russia at 78; toured 10,000 miles through the wilds of Mexico, from which she brought back a few dollars' worth of goods. She took away from a bandit. She was then 81.

Will Be Welcome Change

Higher Type Of Entertainment At Chicago Fair This Year

The decision of the Fair authorities at Chicago, to change the emphasis upon the type of entertainment to be offered this summer is interesting as an indication of what the majority of last year's visitors found worthwhile. In the words of one correspondent there is to be more variety and less ballyhoo, more culture and less clatter, more taste and less tinsel in 1934 than there was in 1933.

The midway is to be moved to a remote part of the grounds, and in its place are to be installed replicas of English, German, Swiss, Spanish and Arabian villages pasted along the lines of the Belgian village that was so popular last year.

Authentic Swiss chalets, rural German mills, Spanish castles, British inns, and Tunisian mosques will compete with Flemish cafes and shops for the favor. The change, we think, is to the credit of American taste in entertainment. Fan dances and peep shows are not, it seems, the highest common denominator in amusement.—Detroit Free Press.

Confucianism Revived

Although the Nanking government frowns upon all forms of superstition and upon religious worship and has closed or confiscated hundreds of temples, the Canton region is officially sponsoring a revival of Confucianism and is, in effect, making it a state religion.

Railway carloadings in France last year totalled 16,523,029.

MAKE YOUR FALSE TEETH HOLD FAST

Eat, talk, sing and shout and never fear dislodgement. Your false teeth stick all day long when you sprinkle on Dr. Wern's Powder—they can't slip. Prescribed by world's leading dentists—they know it's the best! Costs but little—any drugstore.

Hans Christian Andersen

Son Of Poor Shoemaker Becomes A Writer With World-Wide Fame

Denmark recently celebrated the birthday of a poor shoemaker's son who lived to become one of the nation's most famous literary figures. He was Hans Christian Andersen, whose fairy tales are known among children and adults in almost all civilized countries.

Andersen, backward and considered stupid in his youth, was born at Odense in Funen province, April 2, 1805. His parents had so little money the entire family lived in one room.

Andersen always scored his biggest success with fantasy, but had ambitions to write romance and did, in fact, achieve some notice as a novelist and a poet.

His fairy tales, named his fans all over Europe. He was accorded a great welcome when he went to England in 1847. When he left Charles Dickens bade him farewell at Ramsgate pier.

In 1872 Andersen fell out of bed and was severely hurt. He was never well from that time on, and in 1875 he died at his home near Copenhagen.

Requires No Aerodrome

Toronto Inventor Describes Bellplane To Reporters At Plymouth

John Howard, of Toronto, arrived at Plymouth, England, and described to reporters the invention with which he and Dr. H. P. Holler, of Maryland, hope to revolutionize aviation.

"The bellplane," he declared, "is a machine which can land directly and smoothly on land or sea. There's no need for an aerodrome, nor for a mooring mast. It combines the principles of the dirigible with those of the autogyro."

The new invention would make it possible, Howard added, to go from England to Australia without a single stop or the possibility of a single accident.

Bellplane would be 100 feet long, could carry 25 passengers, and have a speed of from 100 miles an hour upwards.

The accident risk would be eliminated in the fact that the bellplane would have an autogyro-like propeller. If the helium bag should burst folding wings attached to the structure could be let out.

THE RHYMING OPTIMIST

By Aline Michaelis

THE WILD BIRD

Question: The singing bird, the joyous bird, How could you let it go? Like silver water through green reeds Its clear notes used to flow. Ah, can it be you did not love Its happy, woodland song.

That old bird of wind and sky The whole day long.

Answer: I loved it well, the bird whose notes Were clear as woodland streams. It tured me to enchanted lands. It brought me back lost dreams; But ever in its cadences I caught a wistful strain. A hint of longing was through That silver-sweet refrain. I loved it so, I could not bear That poignant melody. And so I left the door ajar And set the wild bird free.

Development in Manchuria

Japanese Money Flowing In To Establish New Industries

As an example of the rate at which Japanese money is flowing into Manchuria for investment, five new Japanese enterprises have been launched there within a short period, involving a total collective investment of \$7,000,000 yen (current \$8,100,000). The new enterprises include two sugar beet refineries, one costing \$600,000 and another \$3,000,000; a wheat flour mill to cost \$600,000; a huge brewery to cost \$3,000,000; and a cement plant to cost \$900,000.

Individual microphones for each person sharing in a business conference have been invented to record his words on a steel wire.

Still Paying Rental

Part Of Saint John Harbor Built On Church Property

The Saint John harbor commission has to pay the diocesan synod of Fredericton a rental of 30 English pounds a year for the land bearing some of the new Navy island port facilities.

When the city of Saint John received title to the harbor in the eighteenth century Navy Island, was not included in the gift but reserved "for all time" for the use of His Majesty's Royal Navy.

Taking its name from this action, the island later was seen to be of less use to the royal navy than rental from the diocese to the diocesan synod of Fredericton. The synod continues to levy the same rental assessed by the Madras school.

King William IV, signed the island over to the school, and when the school went out of existence in comparatively recent years the island, with the rest of the school's holdings, came into possession of the diocese.

As the city grew, building firms began living on the island, building chimneys and piers. Street cars and automobiles came to the mainland, and the island residents lived in a world apart. Within a stone's throw of the mainland they went without electricity, telephones and plumbing.

They had the salt water to wash with and were forced to bathe, but for fresh drinking water they had to take a boat to the west side.

Having spent most of their lives on the island, the residents disliked the idea of leaving when port development work reached their doors. They stayed while the coffee dam was being built when construction of the pier and quay started, and even when the big steam shovels threatened to bury their shanties under tons of clay and stone. Finally, obliged to move, they reluctantly floated their dwellings away on scows to an established residence elsewhere on the shore.

Navy Island is no longer an island but a point jutting from the mainland behind a quay. Replacing the piers, boats, paintless houses and flimsy boats are long concrete piers, huge metal sheds and gleaming railway tracks with grain elevators and gantries strung overhead.

The island was a historic spot. Champlain touched it on his exploring trips to the new world, and some 150 years ago British military officers of pro-Loyalist days met Indian chiefs there to bring about a peace between Reds and Whites in New Brunswick.

The harbor as it is now could have been imagined at that time. Dense forest grew down to the waterfront, and Indian canoes dotted the water. The water along the shore of war Albany lay in the offing. Port Howe, stockaded and newly equipped with guns, bristled overhead.

What Not To Invent

National Inventors Congress Gives Gadget Makers Some Tips

Gadget makers of the United States, having examined the newly devised articles at the National Inventors congress held in Seattle, received some tips on what not to invent in the future.

"No more mousetraps, I hope," said Albert Burns, of Oakland, Calif., president of the congress. "There are too many good mousetraps on the market now, and it wouldn't be profitable to contrive any more."

"Thumbs down on life preservers and hair-waving devices," said Vice-President J. M. Baker, Columbus, O. "There are more life preservers than there are lives lost at sea, and the more intricate they become, the less value they have. Women don't need hair curlers—there are too many being made now—they need a better quality of hair, if anything."

"I hope they'll quit inventing locks," said Secretary Leslie E. Johnson, of Reno, Nev. "Every time a man thinks of a new-type lock, another man thinks of a new way to break it."

"No more perpetual motion machines," said Burns. "Even the U.S. patent office is refusing papers to creators of machines supposed to run without power for no reason at all. If they can show us a model that will run even for a few months, we'll be interested."

No Doubt Worthy

Hats off to Amarillo, Texas, where they have set aside a day in honor of mothers-in-law, where the town fathers for the hands and feet of them and the mayor extols them in a formal decree. Sweet peas are their symbol, and sons-in-law dig down so handsomely for bouquets that Amarillo florists can't meet the demand.—Brooklyn Eagle.

"New," said the college man to his dad at the football game, "you will see more excitement for \$2 than you ever saw before."

"I don't know," replied the old gent; "that's what my marriage license cost me."

Birds are not the only long-distance travellers; caribou of North America are known to migrate 600 miles.

Canada Grain Act

Plan To Give Special Grading For Garnet Wheat

A bill to amend the Canada Grain Act, brought into the House of Commons by Hon. R. H. Stevens, minister of trade and commerce, would give the government authority to order special grading of Garnet wheat. This has been a contentious subject in parliament for several seasons.

Under the present regulations governing wheat grading, Garnet cannot be put into number one hard or number one Northern grades, but is admitted into number two Northern and all grades below that.

The amendment now proposed that only wheat of the milling quality equal to Marquis shall be graded as number one or number two Northern. This would exclude Garnet but would admit Reward, another early ripening wheat.

The change would not be brought into effect until proclaimed by the government. Provision is made that the Western standard committee could provide separate grades for any varieties such as Garnet above number three Northern.

In the past a considerable proportion of Garnet has been graded number two. There had been a great deal of controversy as to whether the inclusion of this variety of wheat was injuring the standing of Canadian wheat in world markets since flour of this type is somewhat different as to color and baking qualities compared with Marquis or Reward. Supporters of Garnet have insisted that it makes as good bread as Marquis.

Garnet is an earlier ripening wheat than Marquis and it is contended it has proven itself more prolific than Reward, which produces the early ripening qualities of Garnet and the high milling qualities of Marquis. As many sections of prairies must use the early ripening varieties, efforts have been made to develop Reward to a point where it will produce as well as Garnet and yet retain its early ripening and its milling qualities.

A new wheat developed by crossing Reward and Garnet has been brought up to the sixth generation but is not yet ready to be turned over to the farmers as a substitute for Garnet.

Other amendments to the Grain Act would make technical changes in the regulations to facilitate movement through such eastern ports as Montreal.

Search For Bogeyman

Expedition Into B.C. Mountains To Locate Legendary Character

The first sasquatch-hunting expedition in history headed into the mountains of British Columbia recently on a hunt for the horrible, hairy, naked bogeyman of Indian legend.

J. F. Blakeney and C. K. Blakeney, brothers of Sacramento, medical students at the University of California, read reports of frightened tribesmen that the mythical giant baby-slayer of old had been seen recently in the mountains north of Harrison Lake, and determined to attempt to photograph or describe a "sasquatch."

The famed sasquatch, as described in Indian lore for hundreds of years, is about as villainous a phantom as ever frightened a little papoose anywhere, but adult Indians also are fearful of the monsters.

Discovers Rare Birds

Long Hunter Reports Finding Unusual Species In Labrador

Ernest Doane, former resident of Yarmouth county, Nova Scotia, but now sole inhabitant of Black Bay, has spent thirty winters in Labrador hunting and stuffing birds and small animals to be sent to universities for research study and to museums for exhibition. This year, it is reported, he has found birds of a species he never saw before, and he believes they were driven southward by the intense cold. Several species that never venture so far south as his home were seen this winter in Labrador.

Doane is the only man ever to carry the mail across treacherous Strait of Belle Isle in winter. He did it four times at \$50 a trip.

Must Join Forces

The physicist, chemist and biologist must join forces with the historian, the sociologist and the economist in seeking the solution of man's problems, Dr. R. C. Wallace, president of the University of Alberta and a member of the National Research Council of Canada, said in an address at Ottawa.

Originated In Canada

The present conception of nationalism with the British Commonwealth of Nations was Canadian in its origin, John W. Dufor, editor-in-chief of the Manitoba Free Press, declared before the Columbia University Institute of Arts and Sciences in New York.

One medical authority says that the growth of children takes place entirely when they are asleep.

Bought in Chippington, England, three years ago, a pigeon has just returned to its old cot.

RELIEVES COLDS WITHOUT "DOSING"

Little Helps For This Week

"He leadeth me beside the still waters. He restoreth my soul: He leadeth me in the paths of righteousness for His name's sake." Psalm 23:2-3.

He leads me where the waters glide, The waters soft and still, And homeward He will gently guide My wandering heart and will.

—J. Keble

Out of obedience and devotion arises an habitual faith which makes Him, through union, a part of all our life. He will guide us in a sure path, though it be a rough one, though shadows hang upon it, yet He will be with us. He will bring us home at last through much trial it may be, but through much trial it may be, and through much fear and fainting of heart, in much sadness and loneliness, in griefs that the world never knows, and under burdens the nearest never suspect. Yet He will suffice for all. By His eye or His voice He will guide us if we be docile and gentle, by His staff and His rod if we wander or are wilful, any way, and by all means, He will bring us to His rest.—H. E. Manning.

Relates Grim Story

Diary Of Norwegian Found By Soviet Expedition In Arctic

An Arctic diary has been found relating a grim story of the Arctic by its discovery on Cape Chelyuskin by a Soviet expedition which has just returned to Leningrad. The diary was written by Peter Tessen, a Norwegian, who was a member of Amundsen's expedition to the Arctic in 1919 on the ship Maud. Tessen was lost in 1919, but the diary contains valuable information in the form of messages intended for Amundsen concerning a sleigh expedition to the Arvis Islands and Cape Chelyuskin. The notes, which also contain the results of extensive meteorological observations, are stated to be in an excellent state of preservation, although written with an ordinary lead pencil.

Inverted Figures On Coins

Enhanced Value Of Few Nova Scotia 1832 Halfpennies

Everybody around Halifax is closely scanning all old coins. Recently a letter was received at the office of the Halifax board of trade requesting information about the value of a Nova Scotia halfpenny of 1832.

The letter was referred to E. J. Vickery and he said that if the coin was actually dated 1832 it would be worth up to \$10.00. The reason for this high value for a mere half-penny is the fact that when the coppers were being run off the plate some of them were printed with the numbers 8 and 3 inverted. This mistake was discovered and corrected, but not before a number of coins had been run off and circulated.

Under a new ruling all canned salmon imported into Australia must bear a definite indication of the particular species of salmon contained in each tin.

RIT COLOR STAYS IN

Now you can color lingerie, shirts, slip covers, etc., and know that the color will STAY. The new Rit color is the color. That's why you never have streaks and spots—and why Rit colors last and last—32 Colors.

YOU'LL HAVE "BETTER LUCK" WITH RIT

No longer NEW! Disappears instantly.

THE PARISH OF ST. CYPRIAN, LACOMBE

The writer has been requested by the Editor to write up a short account of the Parish, but as it has been pointed out to him that space in this Special issue of "The Western Globe" is very limited and almost at a premium, he is, of necessity, confined to brevity with a Capital B, and thus can not do anything like full justice to the subject.

The earliest available Minutes of a Vestry Meeting are dated April 8th, 1894, when the Rev. F. W. Goodman occupied the Chair. Rev. Goodman is now Archdeacon of Alaska, and correspondence with him has established the fact that the inception of Anglican Services in Lacombe occurred about two years prior to the date as above-mentioned, which would place it very close to the beginning of the Town itself. The formal establishment of the Parish dates as from May 19th, 1894, when the late Bishop Pinkham issued the Deed of Election, and the 40th anniversary of that event is being appropriately commemorated this year. It is interesting to note in passing that, during at least two different periods of time, Church activities at Ponoma were centred on Lacombe.

A partial list of the Clergy who have had charge of the Parish is given below:
Rev. J. Roderick Terry, 1892-94; F. W. Goodman, 1894-98; G. G. Edwards, 1898-1900; P. G. Rickard, 1900-03; W. B. George, 1903-04; J. Leach-Porter, 1904-05; Canon R. A. Robinson, 1905-10; A. J. Paterson, 1910-18; Henry Amisler, 1918-19; Andrew Love, 1919-23; W. J. Hick, 1923-27; G. J. Fielder, 1927; T. H. Chapman, 1928 up to the present time.

N.B.—Archdeacon Goodman states that Canon Newton, of Clover Bar probably held the first Church Services in Lacombe.

—Rev. T. H. Chapman

THE LACOMBE NURSERIES

The Lacombe Nurseries have been established in Lacombe for twenty-two years. First opening at the Northern branch for the A. Mitchell Nurseries of Letbridge it was bought by the present owners in 1916 when the parent firm went into liquidation. Since that time the Lacombe Nurseries have steadily gone ahead, after a temporary setback during the war years under the management of J. N. B. MacDonald and John MacDonald. Starting at first as growers of ornamental trees and shrubs and fruit trees and bushes only the business has gradually branched out to include the growing of handy rustic, rocky plants, perennials and fruit of all kinds, many never grown in the West before and the result of experimentation of Government and private individuals available to the people of Western Canada. As the result of constant experimentation and testing for hardiness a stock of many imported and new varieties are now available to the people of Western Canada. This stock is imported from Holland,

China, Japan, Great Britain, Russia, and other countries, grown in the Nurseries until thoroughly acclimatized, and then sold to customers under a fair guarantee. Asia is the home of many new varieties to this country or where the parent of species derived their origin. Lilies, crab apples and some of our cherries are only a few of them.

With the addition of another member of the family to the firm in 1931 it was possible to carry out further work which had become necessary and a landscape service, direct by mail service, larger sales force and a larger field resulted. The need of these had been felt for some time but there had not been time for them before. With the increased interest in the past few years in beautification of homes, many people felt the need of some basis to start work on as they found it hard to visualize results by the use of their imagination. A plan drawn to scale helped a great deal and with the use of our experience in Landscape Design and by working in the "idea" of the customer, a satisfactory and pleasing design resulted. A landscape plan is usually shown complete but can be carried out over a period of years if necessary, completing one or more sections each year. The result is a balanced, well-planned property as landscape planning is usually as well as beautification.

The Nursery is located on the North-West corner of the Town limits and off the highway. As the result of this many people passing through Lacombe on the highway and to Gull Lake have not found it convenient to visit our property, year the Town of Lacombe made it possible on very favorable terms for us to secure four acres of land on the highway and just outside the Experimental Station gate. When this is developed it should be an addition to the Town of Lacombe and a very good advertisement to ourselves.

Our experience has been that never has there been more interest in the beautification of community and home grounds. Many towns are putting in boulevards and we supply stock to towns in all the Western provinces. For eighteen years we have supplied from one to three carloads of trees to the city of Calgary, until last year when none were purchased due to lack of funds. This year the Parks Board of Winnipeg purchased trees from us, the Experimental Station at Morden, the Lethbridge Northern Irrigation Company, the Agricultural Department of the Provincial Government as well as many towns in Saskatchewan and Alberta. Requests for our literature have come this year from Ontario, Manitoba, Saskatchewan and British Columbia.

A sales staff of ten full time and twenty seasonal men take care of the needs of customers, assisted by a direct mail campaign. Mr. J. Sowerby has been our foreman for the past six years and in the spring directs the efforts of from twenty to thirty men with a smaller number in the fall. A great deal of the success of a nursery is due to the capable supervision of men in the rush periods of spring and fall shipping. We may say here that our seasonal employees have worked for us in most cases for many years, many of them for years, for great distances for the work. This year it has been necessary to construct a new office to take care of the increased work. With the newly gravelled road to the Nursery we should have more visitors than ever. The public is cordially invited to visit the Nurseries.

As the result of the experience of Mr. MacDonald senior as inspector with the Tree Planting Division of the Dominion Forest Service at Indian Head, which work took him all over Manitoba, Saskatchewan and Alberta, Lacombe was picked as the best location for a commercial nursery. This decision has been amply

Refreshing at NOON

WHEN the children come home hungry at lunch-time, give them a treat! Crisp, delicious Kellogg's Corn Flakes, with milk or cream. A food full of energy, yet light, refreshing, easy to digest.

Try Kellogg's yourself for lunch. See how keen and fit you feel, the rest of the day. Made by Kellogg in London, Ontario.

justified, particularly during the depression and during the dry years, from a distribution, climatic and business standpoint. It is generally known that the Lacombe district has stood up during the depression better than most and as good as the best.

RIMBEY PIONEER PASSES
Rimby, May 5—Saul Preston, 79, one of the oldest pioneers of this district, died Sunday at the home of his son, Francis, of Lacombe. Coming from United States he had home-stayed 15 miles northwest, 30 years ago. Last year while on a visit to Ontario he was in a serious automobile accident from which he never fully recovered.

His wife predeceased him 10 years ago. He is survived by six sons, Paul on the homestead, Francis at Lacombe, Alfred, a musician in Edmonton, Bernard in Ontario, John of Vancouver and Ervin in United States. All but the latter two were present at the funeral.
